

CLIMATE-STABLE MIXED FORESTS

„We have much to gain if we take decisive action to care for our forests. We must strengthen and stabilize them so they can protect us. Our forests are our most important allies in tackling the climate crisis.“

Excerpt from the 2023 Forest Policy Keynote Speech
Federal Minister of Food and Agriculture

ADVANTAGES

A GIFT OF NATURE:
UNIQUE BEAUTY WITH EXCELLENT TIMBER VALUE

- **ROBUST AND ADAPTABLE:** The **ROYALAVIUM** bird cherry is highly resilient and thrives in diverse environments, making it an ideal choice for various locations.
- **PROMOTION OF BIODIVERSITY:** This tree species provides food and habitat for numerous birds and insects, thereby contributing to the preservation of biodiversity.
- **FAST TIMBER PRODUCTION:** This bird cherry grows quickly, producing high-quality hardwood that is highly valued for solid wood furniture and veneers.
- **PRODUCED VIA IN-VITRO PROPAGATION:** Ensures high-quality forest plants, independent of weather conditions.
- **LIGHT-DEMANDING TREE SPECIES:** Ideal for open areas, initial afforestation, reforestation projects, and agroforestry. It improves soil quality and facilitates the establishment of other tree species.

IMPORTANCE AS A HABITAT

- In spring, a pasture for bees, bumblebees, and other insects.
- A food source for many bird and mammal species, as well as caterpillars.
- Habitat for fungi, bacteria, and virus species.
- Old bird cherry trunks and stumps Replacement habitat for stag beetles.

WOOD PROPERTIES AND USES

- Particularly vibrant and warm-toned **ROYALAVIUM** wood.
- Suitable for unrestricted indoor use
- One of the most valuable hardwoods.
- A sustainable alternative to tropical hardwoods for interior applications
- Very high value creation from good trunk quality.
